SUMMARY

BI and Automation Developer with 1.5+ years at Juhayna Food Industries, independently building and deploying 14 production systems — 6 Power BI reports, 3 SAP automation pipelines, 2 mobile applications, and 2 planning tools — with zero IT support or formal team. Deep FMCG domain knowledge across sales, distribution, credit risk, and field operations. Reduced report generation by 4+ hours daily, SAP processing by 90%, and chiller maintenance order creation by 98%.

TECHNICAL SKILLS

BI & Visualization: Power BI (Advanced DAX, Power Query, RLS, Multi-fact Modeling), IBM Cognos Analytics

Data & Automation: SAP GUI Scripting (VA01, ZVAN01N, MB58, MB52), VBA, Power Automate, SharePoint Development

Data Engineering: Power Query M, ETL Pipeline Design, Star Schema Modeling, Excel (Power Pivot, Advanced Formulas)

Programming: DAX (Advanced), SQL

PROFESSIONAL EXPERIENCE

BI & Automation Developer (Official Title: Data Entry Specialist) · Juhayna Food Industries — Upper Egypt

Feb 2025 – Present

- Built 14 independent production systems serving 32+ field supervisors and 25+ managers across 100+ territories and 4 sales channels — with no IT support, budget, or team.
- Reduced daily report preparation by 4+ hours through a unified Power BI platform replacing manual multi-person compilation.
- Saved 90% of daily SAP processing time per branch through end-to-end shipment automation across 25+ territories.
- Reduced chiller maintenance order creation from 5 minutes to 6 seconds (98% reduction) via a 4-layer mobile-to-SAP automated pipeline covering 8 governorates.
- Eliminated inter-channel stock conflict across 8 branches through a mathematically fair constrained allocation algorithm.

KEY PROJECTS & IMPACT

1. UPE Unified Power BI Reporting Platform

- **Challenge:** No unified sales reporting across 4 channels and 100+ territories. Data split across SAP and Sales Buzz. Manual reports consumed 3+ hours daily.
- **Action:** Built 25-page Power BI platform merging two fact tables from SAP and Sales Buzz into a 20+ table model with RLS across 3 hierarchy levels.
- **Result:** Eliminated 3+ hours of daily manual report preparation. Now serves 25+ managers with role-appropriate live data.

2. End-to-End Chiller Maintenance Field Management System

- **Challenge:** Maintenance orders created manually by phone across 8 governorates with no resolution tracking.
- **Action:** Built 4-layer system: mobile SharePoint app → VBA SAP automation → Power Automate email parser (asset-number matched) → live Power BI dashboard.
- **Result:** 98%-time reduction (5 min → 6 sec). Live across 8 governorates, 3,300+ chillers, 32+ supervisors. Full closed-loop tracking automated.

3. Inventory-Aware Bulk Sales Order Automation — 3-Stage Pipeline

- **Challenge:** Creating orders for 15 territories required manual SAP stock checks (MB58/MB52) then order entry — 30+ minutes with stock availability risk.
- **Action:** Built 3-stage pipeline: live MB58/MB52 stock sync with retry logic → full model refresh → automated VA01 order creation with ATP popup handler.
- **Result:** Reduced from 30+ minutes to 4-5 minutes. Zero stock risk. Full per-territory audit log generated automatically.

4. SAP Shipment Automation System

- **Challenge:** Daily shipment creation across 100+ territories consumed 1.5 hours per branch, delaying route starts.
- **Action:** VBA system reading SharePoint, navigating ZVAN01N across multiple tabs, handling edge cases, auto-detecting failures, emailing responsible managers.
- **Result:** 90% daily time saving per branch. Incomplete shipments automatically flagged and communicated.

5. Dry Products Fair Allocation System

- **Challenge:** Production shortages caused physical conflict between channel teams. Simple target splits were unfair due to wholesale direct factory sales.
- **Action:** Constrained proportional allocation engine: Power Query model → ceiling calculation pivot → proportional cap formula across 4 product sheets at SKU level.
- **Result:** Eliminated inter-channel conflict entirely. Enterprise-grade shortage logic, 3 channels, 8 branches, all product categories.

6. New Customer Registration Mobile Application

- **Action:** Mobile web app on Netlify enabling field teams to register customers from their phones with automated Google Sheets data processing.
- **Result:** Eliminated manual office-based customer coding. Live in production across Upper Egypt field teams.

EDUCATION & CERTIFICATIONS

Bachelor of Commerce, English Section (Economics)

Aswan University, 2020

Certifications:

- **Microsoft Power BI Professional Certificate** (Coursera) 6 courses: Data Modeling, ETL, DAX, Deployment, Visualization, Creative Design
- **Microsoft Excel for Data Analysis** (Coursera) Preparing Data for Analysis
- **IBM Data Analytics Professional Certificate** (Coursera) 5 courses: Data Analytics Essentials, Excel Basics, Visualization & Dashboards, Cognos Analytics, Introduction to Data Analysis

*All 14 projects listed are live production systems deployed at Juhayna Food Industries upper Egypt sector
Available for demonstration on request.*
